

The Internet of Things company  
for the development of  
advanced mobility services.

Customized platforms  
to objectify the state  
of transport  
infrastructure

Video multicamera  
recordings for  
special transports  
monitoring and area  
supervision

Systems to analyze  
the capabilities and  
the conditions in  
which these vehicles  
can circulate.

## What we do

We aim to contribute to the improvement of transport infrastructures and to the introduction of autonomous vehicles for the benefits of final users, DOTs and service providers.

## Products & Services

### Platforms to objectify the state of transport infrastructure:

roads, railways, pathways... using systems that combine images and sensors to catch the perception of users

### Video multicamera recordings

for special transports monitoring, for supervision of work zones, for supervision of temporary signaling...

### Systems that help in the introduction of autonomous vehicles

using our third party evaluation systems to analyze the capabilities and the conditions in which these vehicles can circulate.

### On board detection of:

- Road bumps
- Water rafts
- Luminosity detection
- Road marking perception
- Traffic signals perception
- Degree of security due to climatic conditions

we were born to  
transform  
your **perceptions**  
into valuable data
